Investment Objective

TGM’s Global Currency Alpha strategy aims to generate alpha from currency misalignment as market uncertainty changes over time. TGM’s Global Currency Alpha strategy provides strong diversification benefits when mixed with other alpha strategies.

Investment Strategy

TGM’s Global Currency Alpha process is a multi-currency, long/short style strategy, which can be implemented with both currency futures and forwards. TGM’s Global Currency Alpha process incorporates purchasing power parity (PPP) as a valuation anchor for currencies as used by investors in periods of increased uncertainty. We also capture other economic and financial factors that typically drive the currency markets. These factors are combined with the use of machine learning techniques.

Performance¹

TGM’s Global Currency Alpha strategy targets a return of RBA Cash plus 8-10% over the long term.
